

World Class Standards

# Spectrum and standardization

ITS Safety 2010 Symposium  
Tokyo 23 – 27 February 2009

Soeren Hess  
Chairman ETSI TC ITS

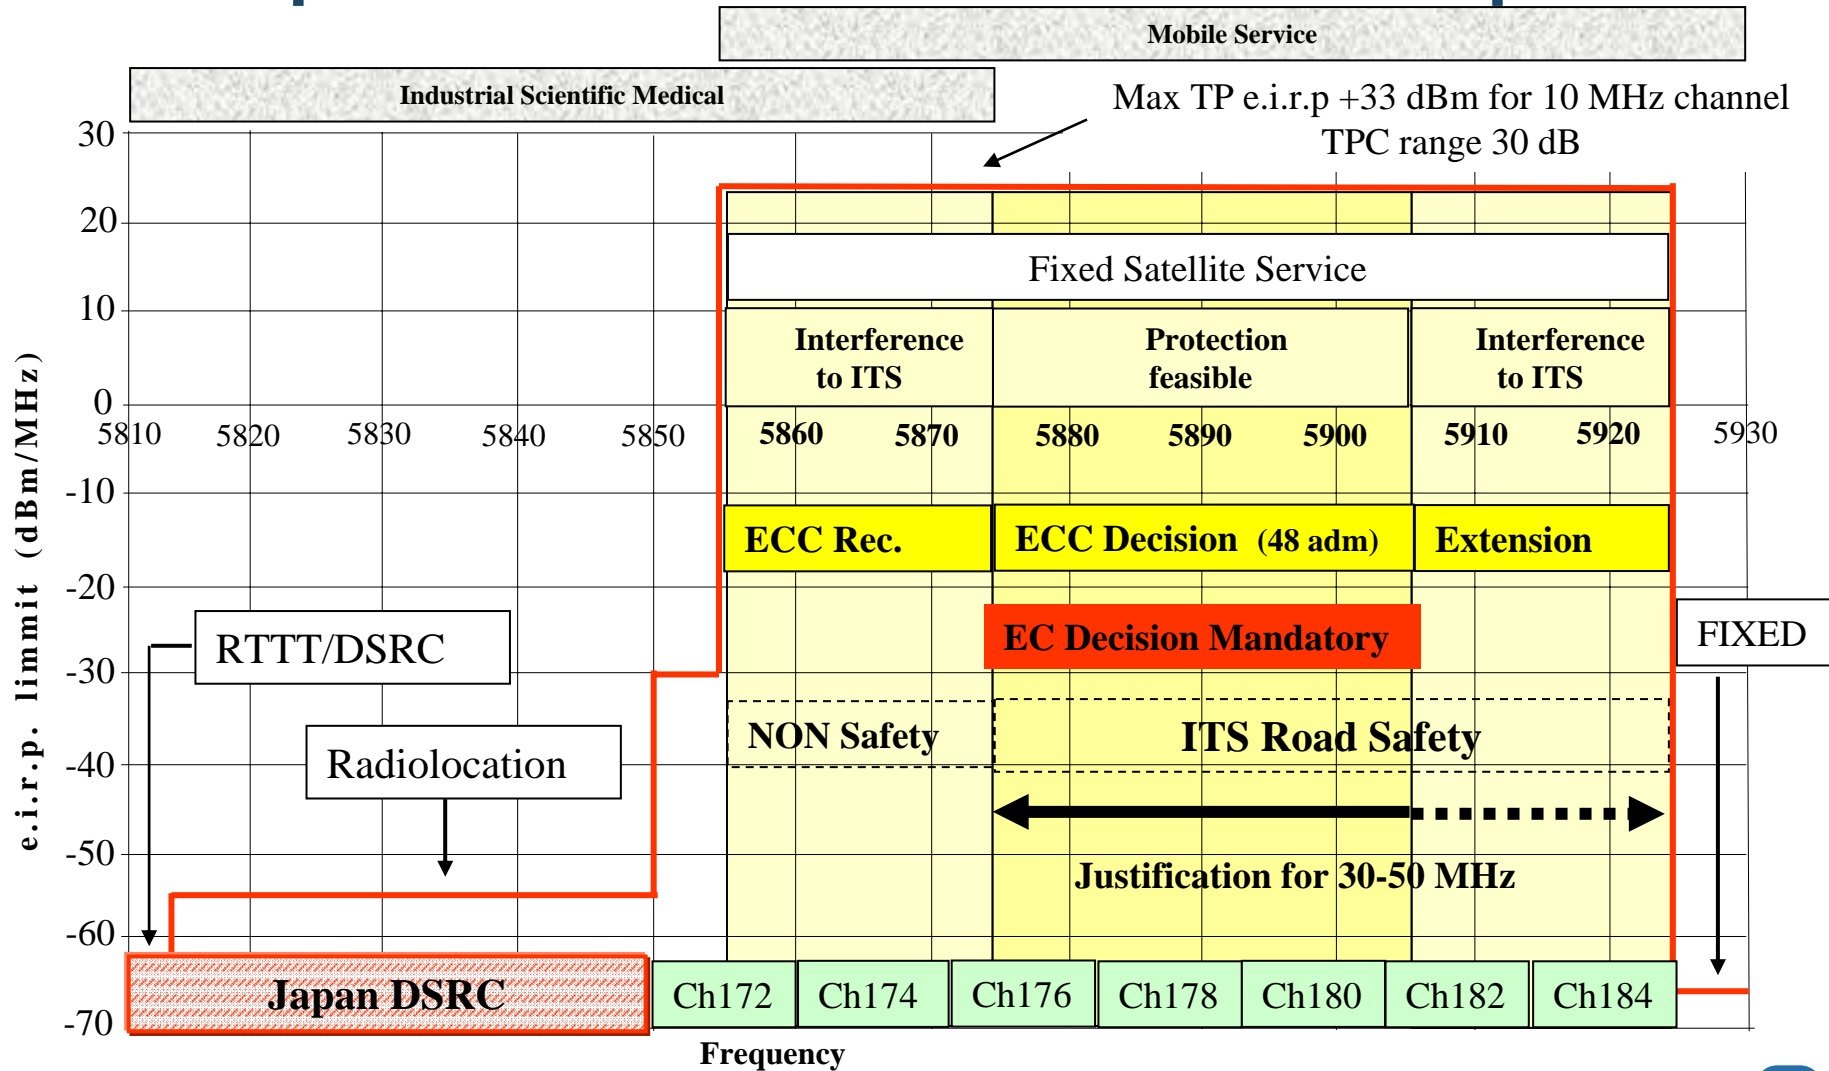

©ETSI 2008

## Outline

- ❑ **Current focus on 5.9 GHz cooperative ITS systems**
- ❑ **Spectrum allocation for ITS in Europe**
- ❑ **Channel allocation in the 5.9 GHz band**
- ❑ **Standardisation activities**
  - **Application requirements**
  - **Architecture and crosslayer**
  - **Network and transport**
  - **Media**
  - **Security**
- ❑ **Roadmap for standardisation in Europe**
- ❑ **World wide cooperation**

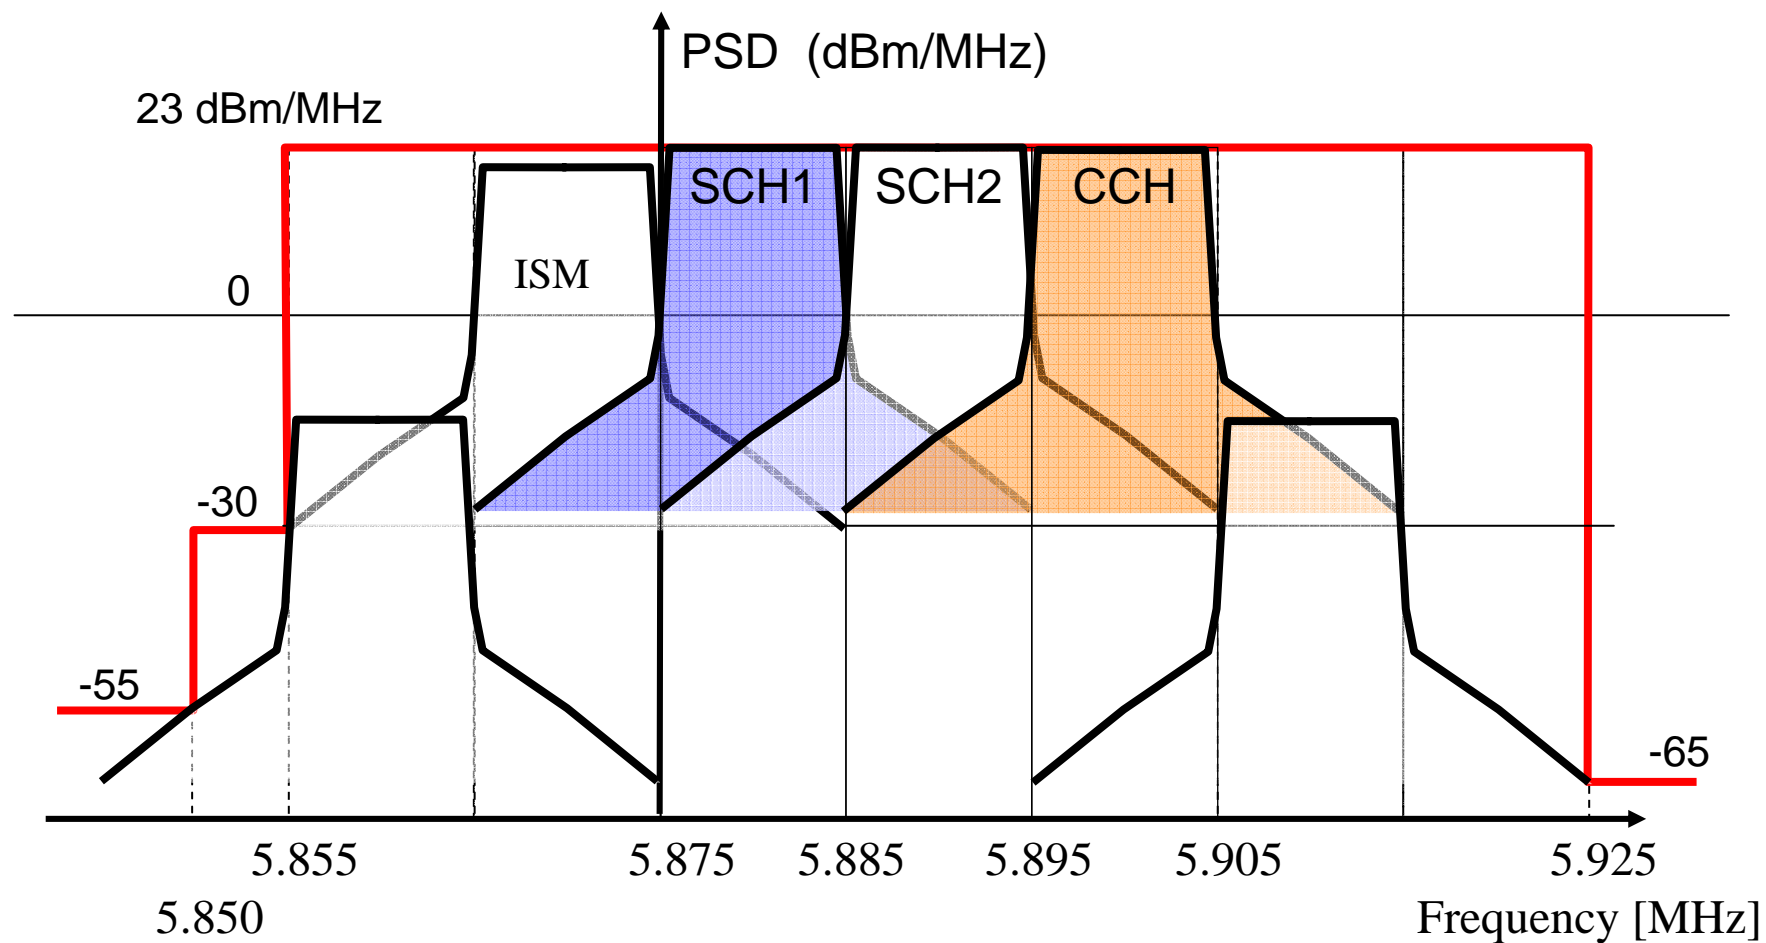

# Spectrum allocation for ITS in Europe

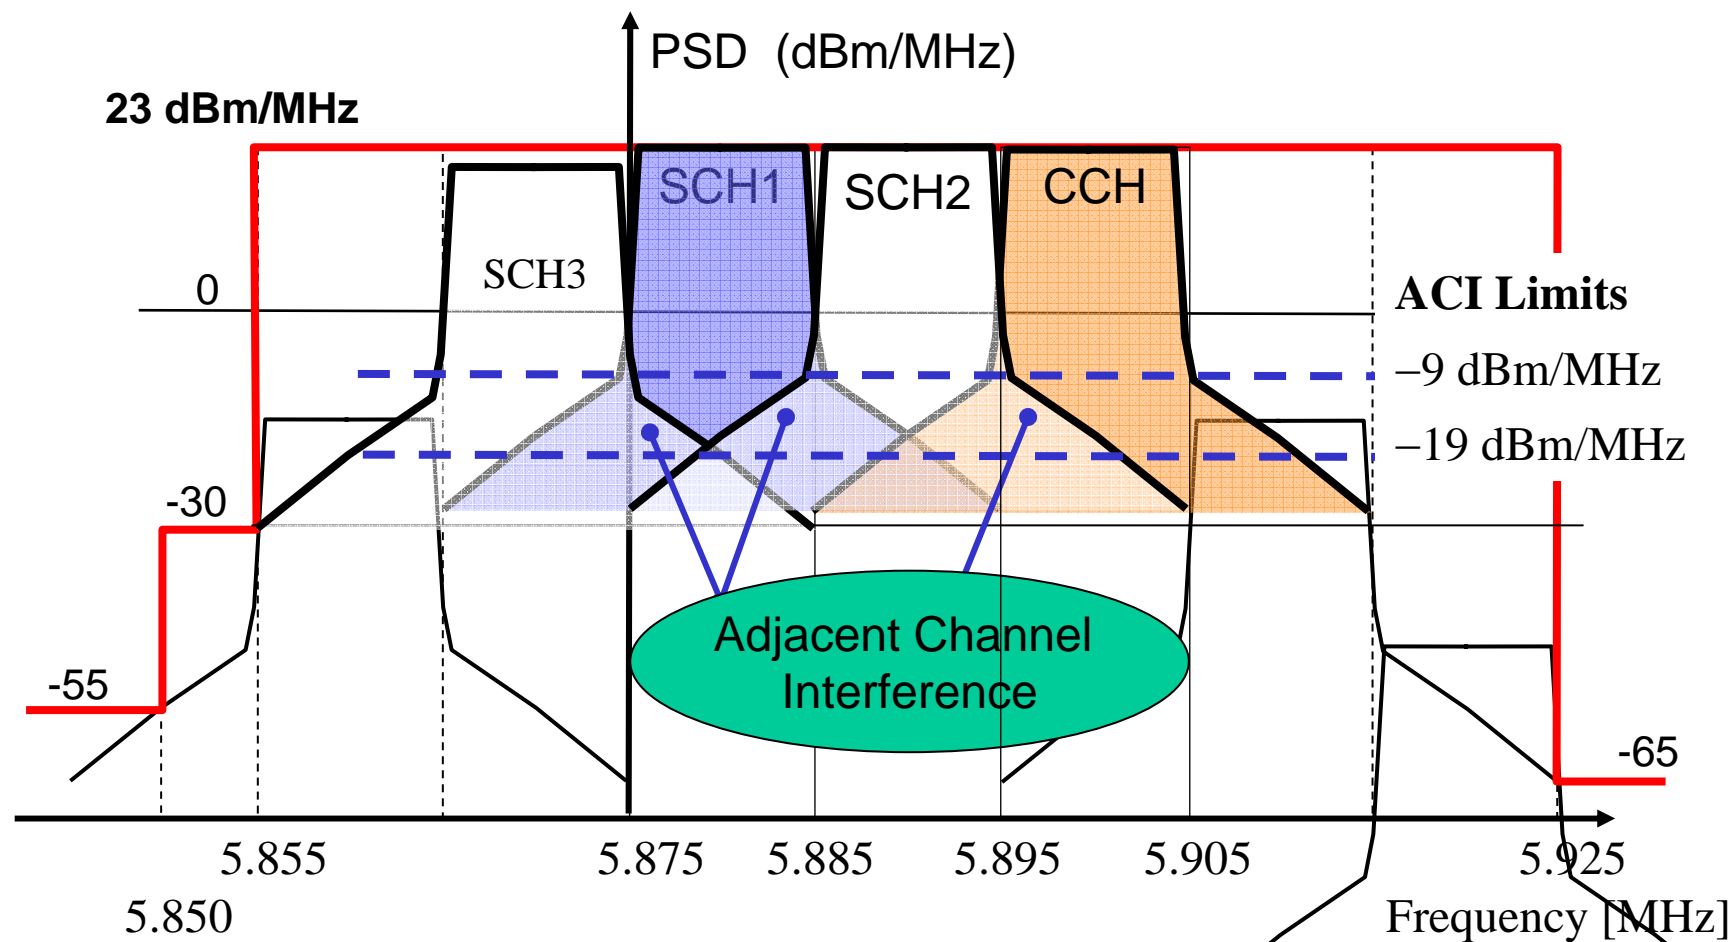

# Channelisation in the 5.9 GHz band

using reduced power levels (2 W devices)

# Channelisation in the 5.9 GHz

Adjacent channel interference – protection of cooperative ITS band

## Channel Usage (current proposal)

### ❑ CCH – Control Channel

- Cooperative Awareness Messages (CAM) (Network layer beacons)
- Single hop messages (high priority) Emergency messages
- 1st hop of multihop / geocast messages

*Low Latency*

**Emergency  
CAM**

### ❑ SCH1 – Service Channel 1

- Geocast messages (from 2nd hop)
- Single hop messages (low priority)

*Long distance*

**GEOCAST**

### ❑ SCH2 – Service Channel 2

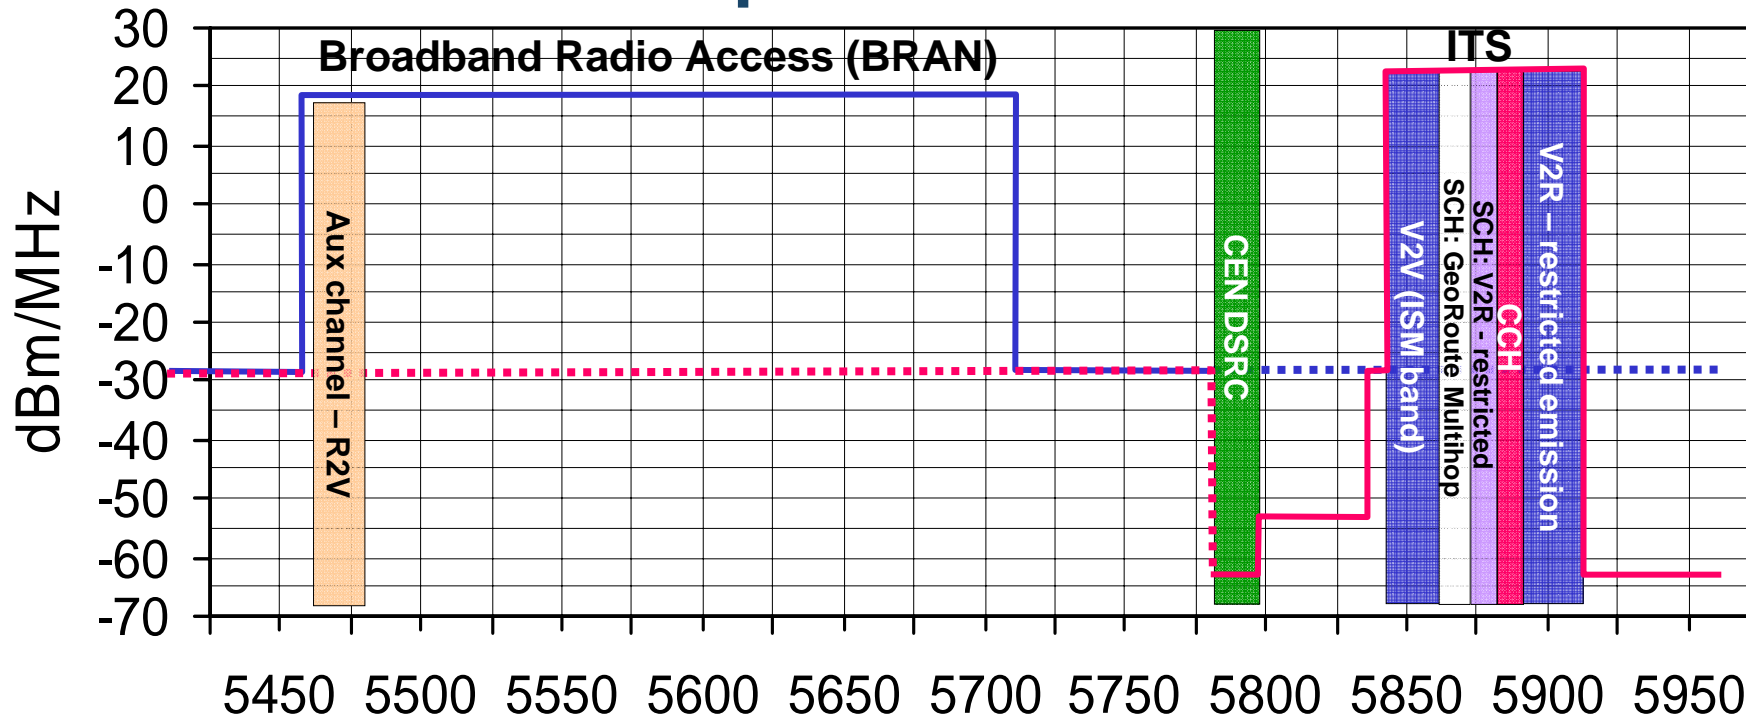

- High throughput, short distance Unicast with RSU

*High throughput  
Short distance*

**RSU  
Unicast**

# Channel specification in 5.9 GHz

- Common Control Channel, Broadcast data, 10MHz@5900 (ch180) (Used by all)**
- Service Channel: GeoRoute multihopping, 10MHz@5880 (ch176) (Safespot/C2C-CC)
- Aux Channel for roadside initiated data, 20MHz @5480+ (ch96) (CVIS/COOPERS)
- Vehicle-Roadside data, 10MHz@5890 (ch178) (Safespot/C2C-CC, not used initially)

Blue line represent European spectrum mask for BRAN (conditional use for ITS)

Red line represents European spectrum mask for ITS 5.9

## Application requirements standardisation

- Vehicular Communication Basic Set of Applications (BSA) – Definition
  - BSA Functional Requirements
  - V2X Co-operative Awareness Message (CAM) standardisation
  - V2X Decentralised Environmental Notification Message (DENM)
  - BSA Operational Requirements Second Level
- 
- Objective to select basic set of applications for deployment 2012-2015
  - Deliverable by April 2009
- 
- Followed by extended set of application requirements

## V2X / I2V Co-operative Awareness Message (CAM)

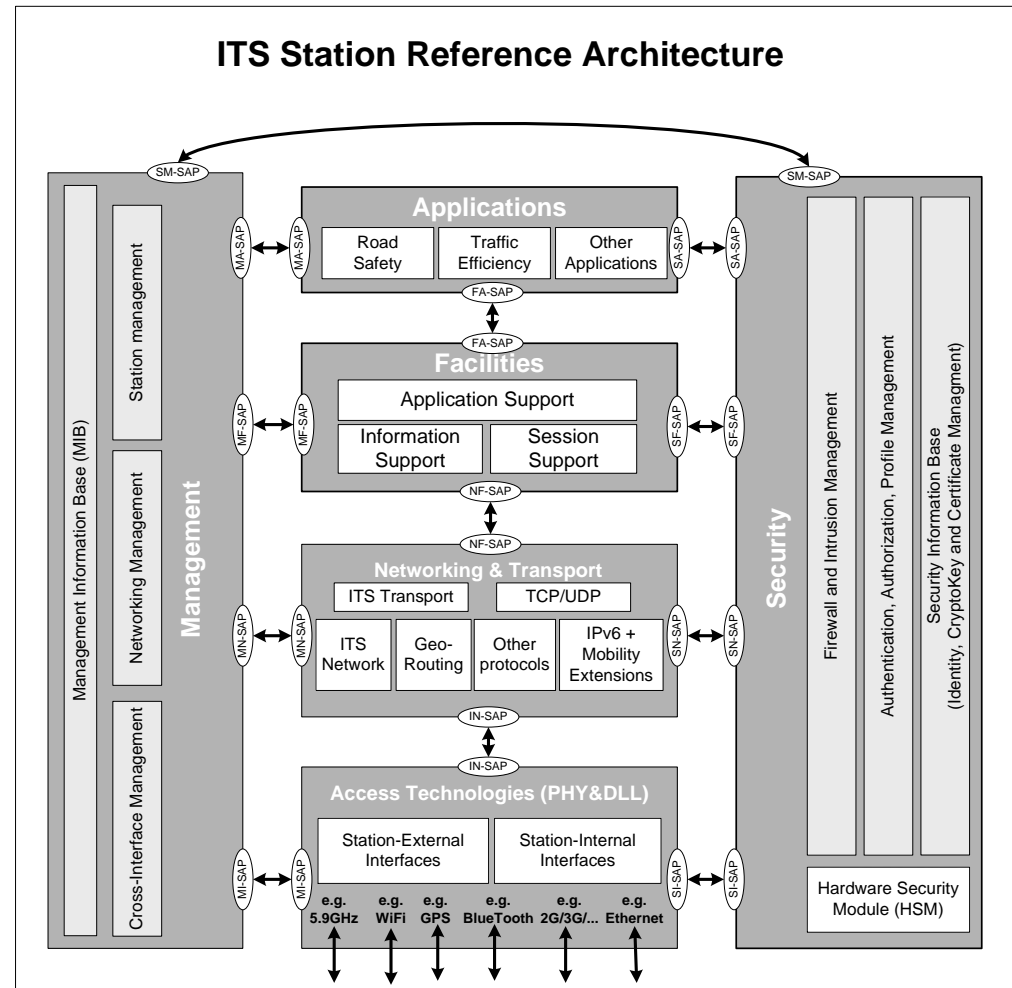

## V2X / I2V Decentralised environmental notification (DNM)

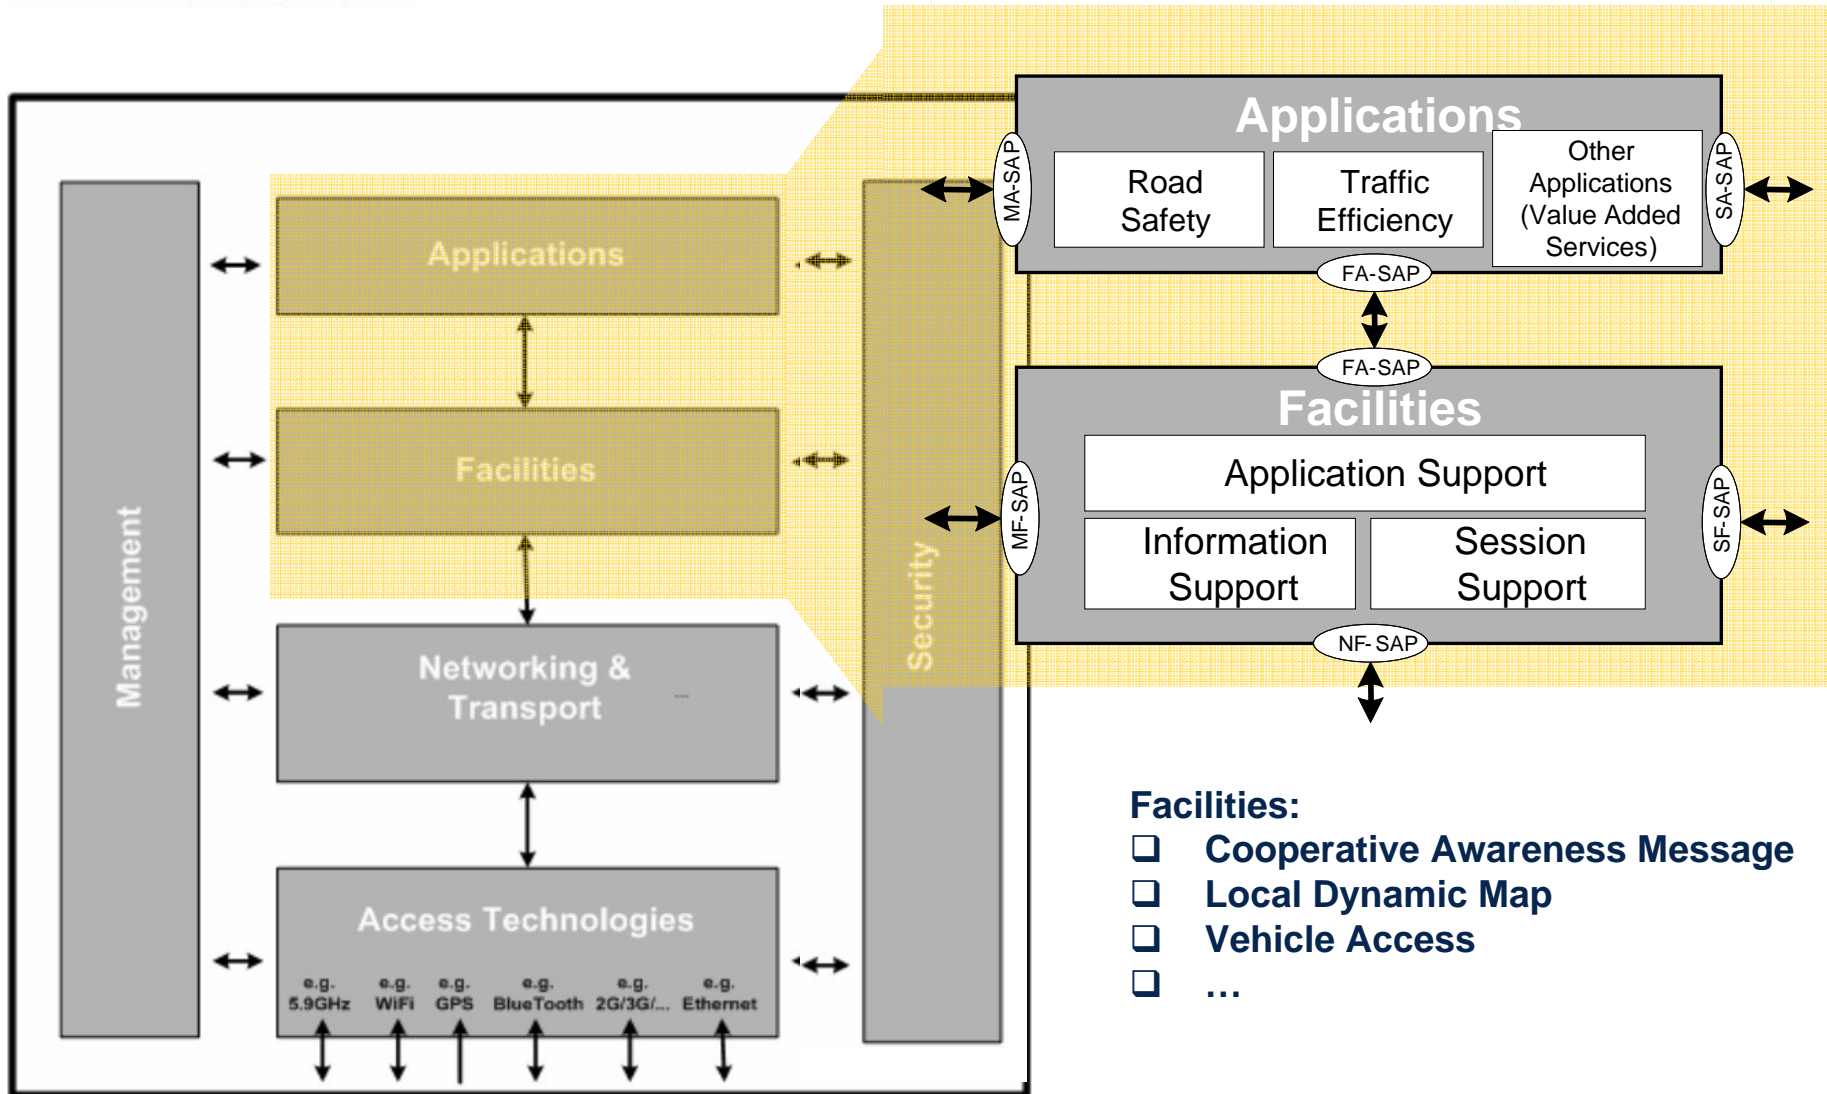

## ITS Communication Architecture

- ❑ Developed within COMeSafety
- ❑ Basis for Architecture work within ETSI TC ITS
- ❑ Coordinated internationally
- ❑ Considered for standardisation

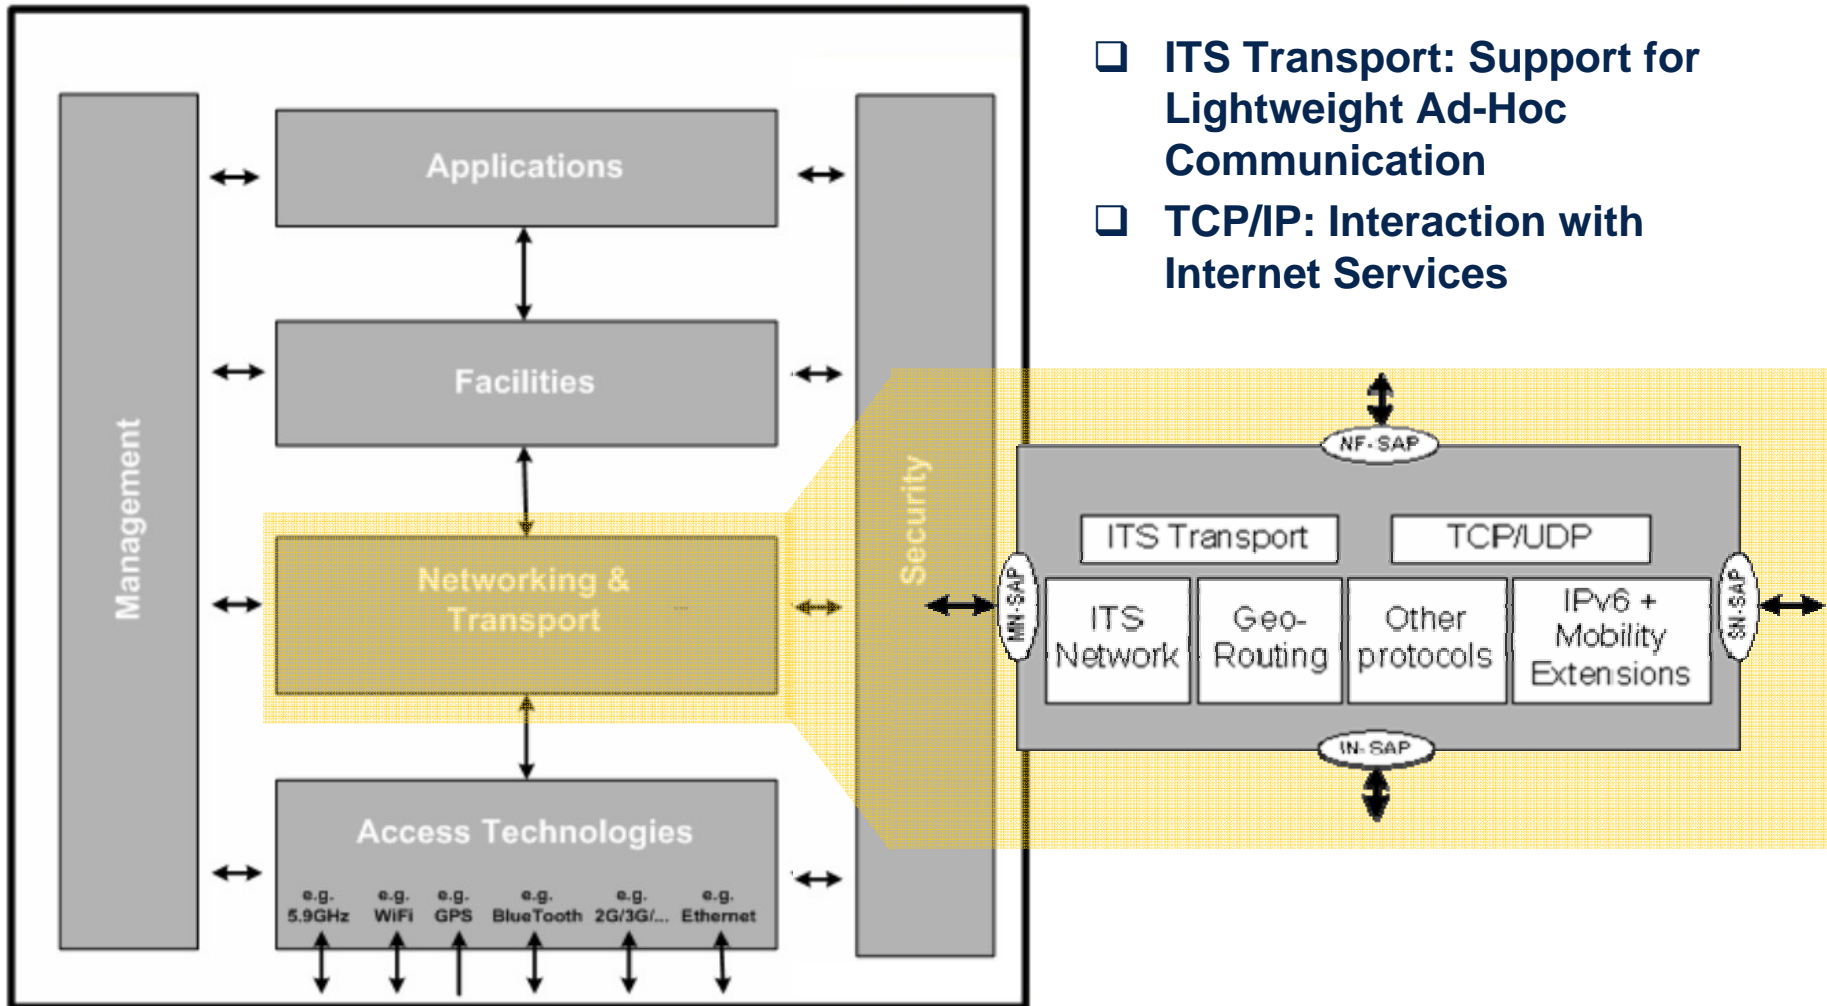

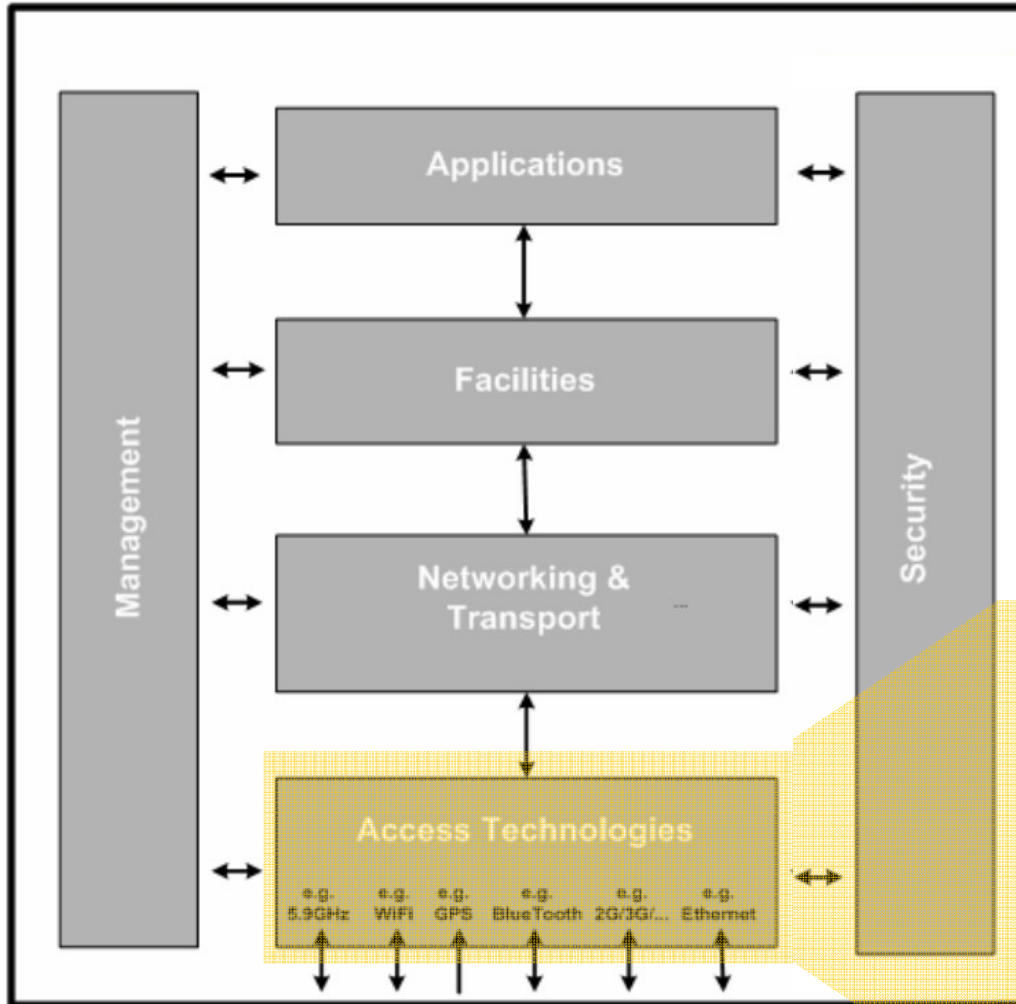

**Facilities:**

- Cooperative Awareness Message
- Local Dynamic Map
- Vehicle Access
- ...

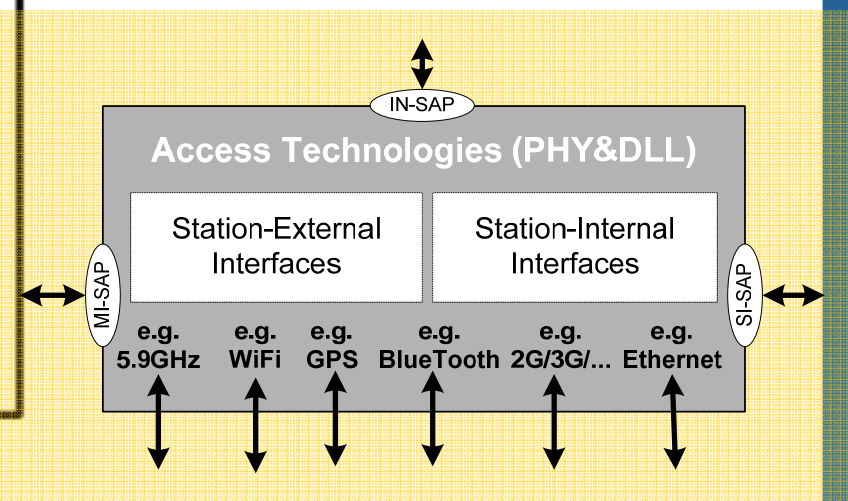

# World Class Standards

- ❑ ITS Transport: Support for Lightweight Ad-Hoc Communication
- ❑ TCP/IP: Interaction with Internet Services

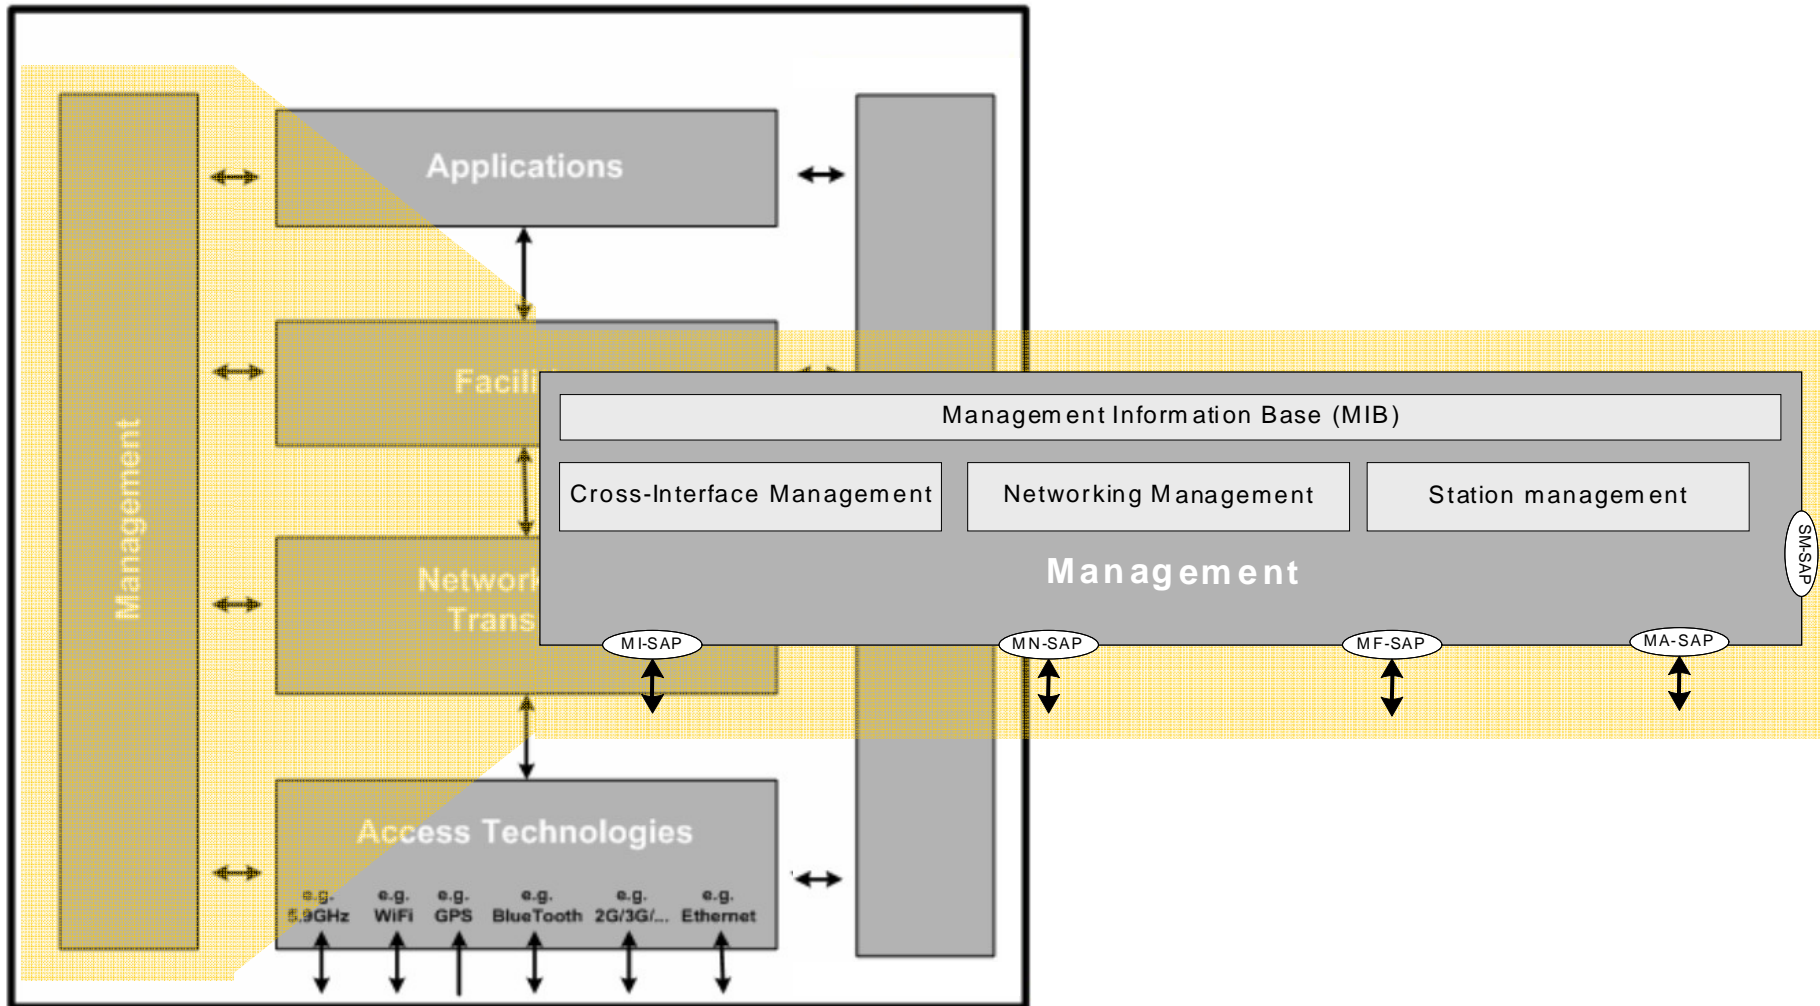

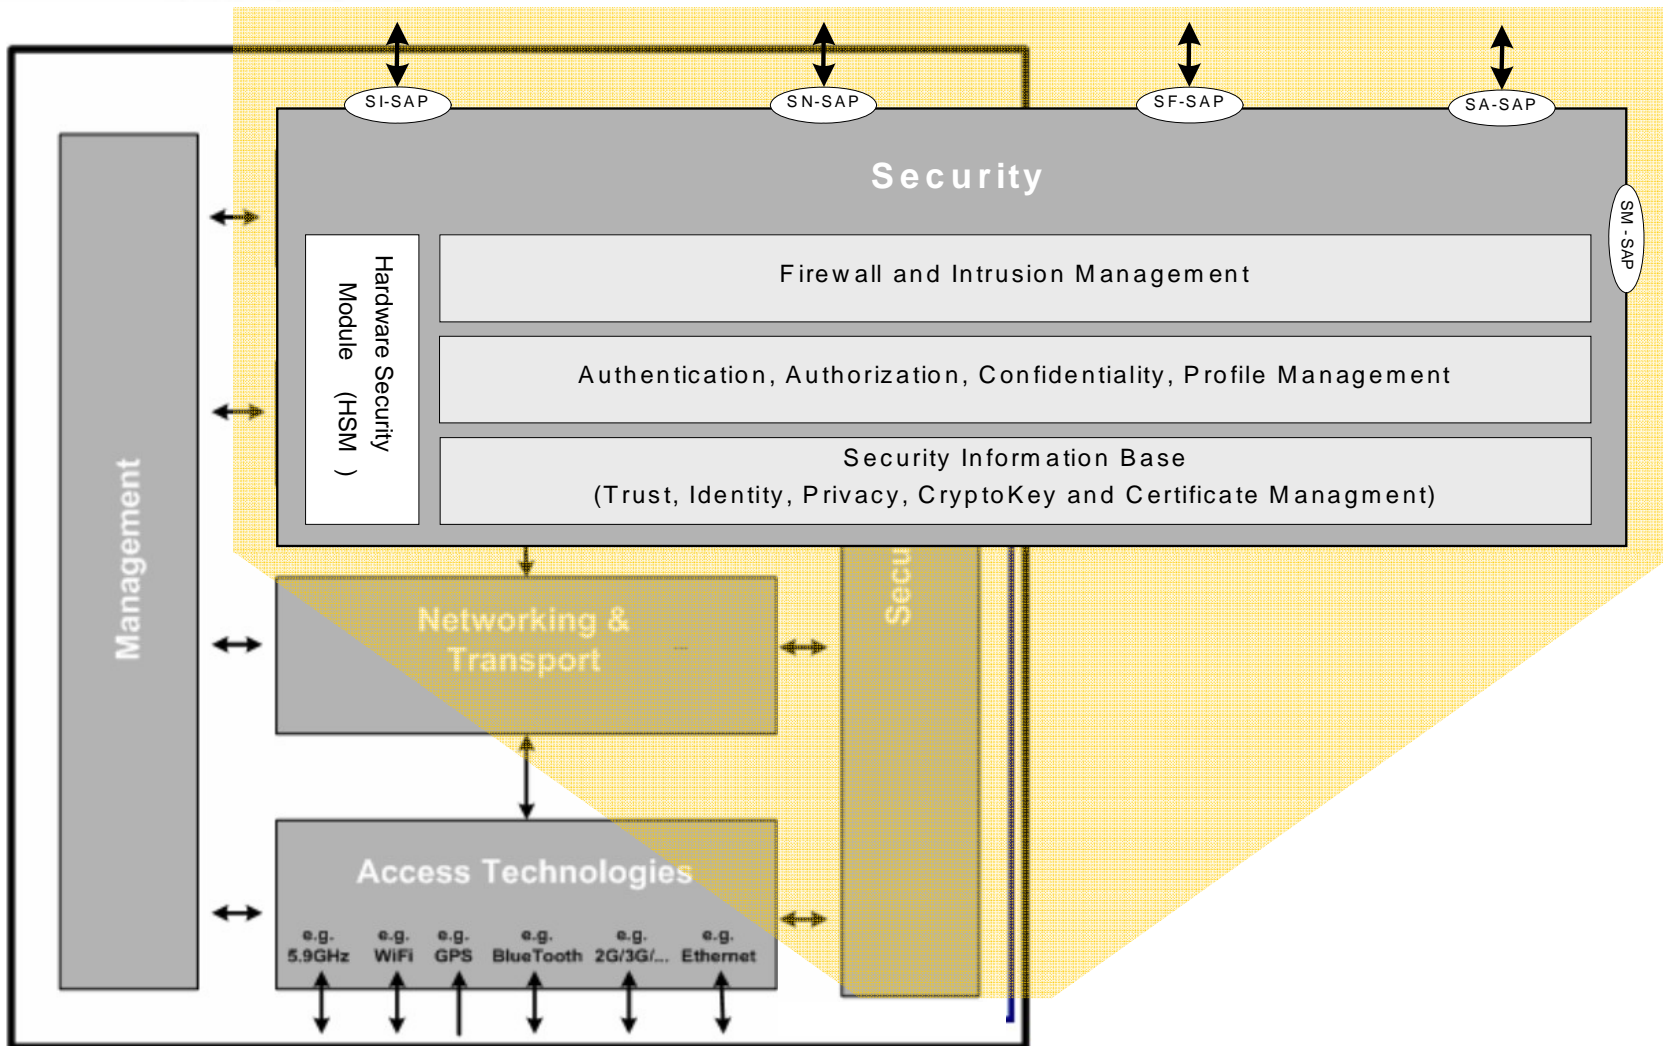

- ❑ Available Access Technologies outlined in Architecture Document
- ❑ No prescribed technologies for applications

## Network and Transport standardisation

- Requirements
  - Network Scenarios
  - Network architecture
  - GeoNetworking
  - Transport protocols
  - Internet Integration
  - Interoperation of IP version 4 and 6
  - Network management
- 
- Deliverable October 2009

## Media standardisation

- ❑ **STF on 5.9 GHz profile standard**
  - **Based on 802.11p CALM M5 (21215) PHY and MAC layer**
  - **Approval envisaged April 2009 – publication July 2009**
  - **Follow up with protocol conformance testing**
- ❑ **Technical specification on channel use**
- ❑ **Technical specification on transmitter power control**
- ❑ **Technical Report on 5.8/5.9 GHz mitigation technique**
- ❑ **63-64 GHz spectrum – ECC Decision in March 2009**
- ❑ **Harmonised standard on the use of 63-64 GHz by end 2009**

## Security standardisation

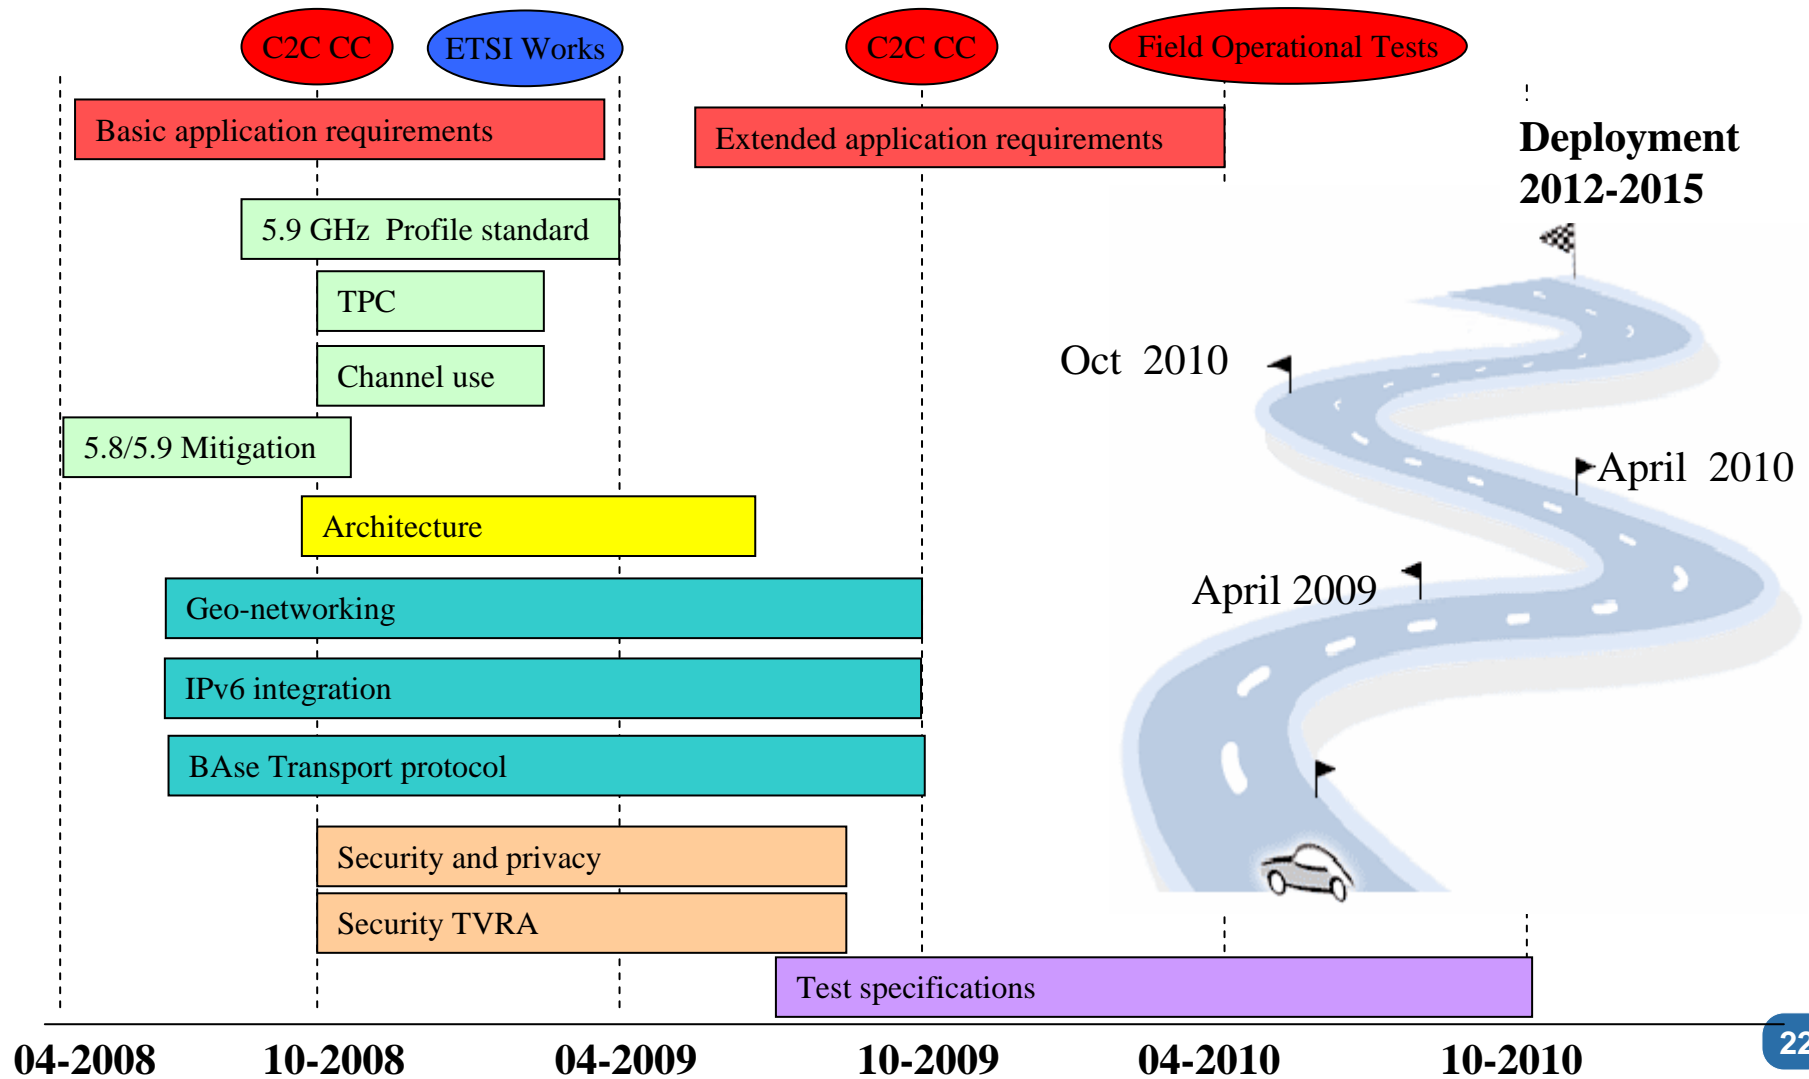

- ❑ **ITS security – Threat Vulnerability and Risk Analysis (TVRA)**
- ❑ **Objectives and functional requirements for TVRA – stage 2**
- ❑ **TB approval envisaged September 2009**
  
- ❑ **STF on ITS Security development – 5GHz**
  - **Provide TS on ITS security for 5 GHz systems**
  - **Provide TS for security objectives and requirements**
  - **Provide ITS security TVRA**
  - **Review application of IEEE 1609.2 (WAVE) security application for the ETSI security framework**
  - **Planned deliverable September 2009**

## Other current activities

- STF 353 – on ICT in Cars
  - STF 359 – Profile standard
  - STF 365 - Conformance testing ISO 21218
  - STF 372 - Conformance testing on Italian DSRC
  - STF 373 on Security
- 
- Conformance testing – Plug tests
  - Comprehensive field operational tests in Europe
- 
- ETSI TC ITS workshop
  - Coordination activities with R&D projects and C2C CC

# Roadmap for current ETSI TC ITS activities

## TC ITS Workshop 4-6 February 2009

- ❑ 125 participants
- ❑ ETSI members – European projects – European Commission
- ❑ TC 204 – Japan – Korea – USA – ITU-T – ITU-R

**R&D Projects**

**European Commission**

**ITS in place**

**Activity discussions from WGs**

**Road operators / Infrastructure**

**Test Interoperability and FOT**

**International cooperation**

**Increased standardisation activity  
in 2009 – 2010**

**Political pressure on deployment**

**Commission Directive/Mandate**

**Global standardization aspects**

**ETSI ready to lead**

**Next workshop – 10-12 February 2010**

## Global coordination and standardisation

### Joint standardisation

- ETSI TC ITS
- ISO TC 204
- IEEE 1609 and 802.11p
- IETF MEXT

### Work areas

- Radio 5 GHz based on 802.11p
- Geo-networking
- IPv6 networking
- Other networking (e.g. WAVE, ERSN)
- Security
- Architecture

### Objective

- Joint development of standards
- Avoid overlapping standards
- Regional profile standards
- Bottom – up approach
- Work by email and web meetings

### European initiatives

- European Architecture proposal
- Global support from SDOs
- Executive session in Stockholm
- Ongoing contacts Workshops etc
- Japan – Korea – China invited

## Thank you for your attention

**Søren Hess**  
Chairman ETSI TC ITS
